Ideation Phase
Define the Problem Statements

Date	19th September 2022
Team ID	PNT2022TMID35256
Project Name	Inventory Management System for Retailers
Maximum Marks	4 Marks

Customer Problem Statement Template:

The main Objective of this Project is to provide a desktop based application that allows retailers to monitor all Inventory related information, including stock management, sales data and purchase information. The application allows the retailers to manage their products flexibility and have complete insight into what is stored in their inventory, and request additional stock as and when needed.

I am	Retailers
I'm trying to	Get more insights on stocks and their availability to increase productivity and reduce overspending
But	Manual management of the stocks are difficult and existing systems aren't much flexible
Because	Too many stock items cause bigger problems and current systems are obsolete
Which makes me	Want to create better inventory management system and increase the accuracy and flexibility for the vendors
